Free resume summary

Brief description of the scientific career, the main scientific-technical achievements obtained, the scientific-technical interests and objectives in the medium/long term of the line of research. It also includes other important aspects or peculiarities.

International Doctor Researcher and Assistant Professor Doctor of International Relations, East Asian Studies and Japan, with a research career of more than 12 years certified by ANECA with accreditation as a Professor Contracted Doctor (PCD). Obtaining a six-year period of living research.

My work has been motivated by the main objective of building bridges between Asia and Europe in general, and Spain and Japan in particular. This is in addition to my goal of promoting Spanish academia and positioning it at the centre of global discourse. Awarded the prestigious Japan Foundation Postdoctoral International Japanese Studies Fellowship for a 12-month research in Japan developing as principal investigator the project "Communication, Democracy and Policymaking in Japan: A Study on the Role of International Communication in Japanese Social Cohesion and in Government Social Support", as a visiting researcher at the Graduate School of International Relations (GSIR), at the International University of Japan (IUJ). The total funded amounts to €48,200, being the most competitive and best-funded Japanese studies fellowship in the world. The researcher has been the only one in Spain to have received the fellowship in the years 2016/17. The Japan Foundation Fellowship is the Asian equivalent of the EU Marie Curie Fellowship and the US Fulbright Scholarship. This research involved conducting a nationwide survey in Japan, with a sample size of +3500, using a quantitative methodological approach and the advanced SPSS software as an analytical tool to identify the relationship between international communication and Japanese society. The field research was conducted at Osaka University's Faculty of Law and Politics and Osaka School of International Public Policy (OSIPP).

He is part of the Japan Research Group at the University of Zaragoza, which has been awarded the Reference Research Group of the Government of Aragon, one of the main research groups in Japanese Studies in Europe. In addition, he demonstrated a consolidated capacity to participate, create and lead international research groups, such as the International Research Group at Kobe University, in Japan, and the India-EU-Japan Security Studies Network, connecting Zaragoza with the international research centres in Kobe and Delhi.

Development of a global research activity consisting of numerous international seminars and research positions in Japan, New Zealand, UK, China, USA, Belgium, India and France. This international research allowed me to publish 21 articles and book chapters in high-impact international journals and publishers indexed in SPI Q1 or SCOPUS Q3, as well as in the media, facilitating the transfer of knowledge to society.

General indicators of quality of scientific production

Information on the number of research six-year periods and the date of the last one granted, number of doctoral theses directed in the last 10 years, total citations, average number of citations/year during the last 5 years (not including the current year), total publications in the first quartile (Q1), h-index. Includes other indicators considered important.

OBTAINING A SIX-YEAR PERIOD OF LIVE RESEARCH IN 2021 BY THE AGENCY OF ARAGON UNIVERSITY QUALITY AND PROSPECTUS (ACPUA) (2010-2021)

INTERNATIONAL PUBLICATIONS - 21 publications in highly-qualified international journals and publishers that share 12 years of international scientific research findings, including: - 11 book chapters in high-impact publishers indexed in SPI publishers (Q1): UPV / EHU, EUNSA, Plaza y Valdés, Fragua & Dykinson.

-Publications in high-impact journals indexed in SCOPUS among others.

- Wide international distribution of the article, receiving invitations to international seminars, conferences and publications in other high-impact journals such as the A&P Policy Society of the Australian National University.

INTERNATIONAL POST-DOCTORAL RESEARCH PROJECTS - Received the prestigious international Japanese studies grant from the Japan Postdoctoral Foundation, worth €48,200, the most competitive and best-funded Japanese studies grant worldwide. The only researcher in Spain to receive a grant in the 2016-17 academic year.

Asian equivalent of the EU Marie Curie Fellowship and the US Fulbright Scholarship.

-International research at 13 universities in America, Europe, Oceania and Asia: Japan (Osaka University, Kyoto University of Foreign Studies, Kobe University and International University of Japan), China (Beijing Foreign Studies University and Peking University), New Zealand (Auckland University), USA (New Mexico State University), UK (Abertay University, School of Oriental and African Studies, University of London and British Library), India (Ashoka University) and Belgium (Brussels School of International Studies & European Parliament).

-National Coordinator of the international research project "Celebrity Endorsement and the 2014 European Elections" Responsible for coordination with universities in Germany, Austria, Italy, Poland, Romania, the United Kingdom and Sweden.

GLOBAL RESEARCH NETWORKS

-Visiting Professor at Princeton University to give the talk Women, Globalization and Religion: The Depiction of the Virgin Mary in Europe and Asia on March 28, 2022 at the Princeton Institute for International and Regional Studies.-
Research networks: 1) Japan Research Group (University of Zaragoza). 2) Kobe University International Research Group on IR. 3) InCom-OCVE Research Group (UAB). 4) Research Group on International Terrorism and Public Diplomacy (University of Navarra) 5)

Pan-European Network for Japanese Studies "Takumi", France. 6) India-EU-Japan Security Studies Network (Delhi, Kobe and Zaragoza).

NATIONAL RESEARCH AWARDS AND ACHIEVEMENTS - Government

of Navarra predoctoral scholarship, publicly awarded and based on academic merits, worth €59,800.

-In May 2018, he received the 3 PEP ANECA credentials: Assistant Professor Doctor (PAD), Private University Professor (PUP) and Contract Professor Doctor (PCD).

-Extensive presence in the media, interviews in newspapers, television and radio on international relations.

-More than 17 years of experience in the academic world, researching international relations and global communication, and actively contributing to strengthening Europe-Japan relations.

Primary (UNESCO code): 590100 - International relations Secondary (UNESCO code): 550610 - History of international relations Tertiary (UNESCO code): 560300 - International law

Duties held: My research career allowed me to belong to the Japan

Research Group at the University of Zaragoza (UNIZAR), awarded as a Reference Group by the Government of Aragon. It is one of the most important in Europe in the political, legal and artistic study of Japan. In this research group, I have promoted academic cooperation between Spain and Japan, encouraging the recognition of Spanish academic discourse in East Asia. Using the research group, I have promoted numerous international conferences and articles such as the 5th International Conference on Japan and Water (2017, where I contributed a possible peaceful solution to the territorial conflict of the Senkaku Islands. Another example is the 6th International Conference celebrating 150 years of relations between Spain and Japan, where I conducted a comparative study of the communicative, social and academic dimensions between both countries. I also contributed to the European promotion of the UNIZAR Research Group, advancing its integration into the pan-European network of Japanese Studies Takumi, as well as in the Centre Européen d'Etudes Japonaises d'Alsace (CEEJA), in France. In addition, I collaborated in the dissemination of research results in three dimensions. Firstly, to society, with information activities and knowledge transfer. Secondly, to graduate and postgraduate students through classes in the Diploma of Japanese Studies and in the subjects of International Relations and Public International Law. Finally, through international conferences such as the AAS-in-Asia International Conference held in Delhi, India; or the upcoming ones already accepted such as the AAS-in-Asia to be held in Bangkok, Thailand, the Leiden University in the Netherlands and the Asian Studies Conference in Saitama, Japan. I have also helped to obtain international funding sources for the projects developed by the research group, such as funding from the Japan Foundation (2016) to carry out postdoctoral research as a member of this group, funding from Hosei University (??? ???), in Japan, for participation in the CEEJA (2017, 2018) or private funding for incorporation into the pan-European Takumi group (2018).

I research how different societies in a globalized world can protect their resources, enhance their international projection, increase their competitiveness and achieve transnational democratic solutions to global challenges using non-traditional diplomatic channels: international communication, cultural exchanges, business innovation and scientific research. The development of Cultural Diplomacy as a discipline for the promotion of regions and countries in the globalized world led me to reinforce the theoretical model and share my findings with research positions in centers and universities around the world, such as the School of Oriental and African Studies.

(SOAS) (London), Brussels School of International Studies (Brussels), Library of the European Parliament (Brussels), University of Auckland (New Zealand) and British Library (London). My research also received a competitive merit-based grant from the Government of Navarra for a total amount of 59,800 euros. Since then, I have dedicated my career to empirically finding ways to internationally promote intercultural social interactions through cultural diplomacy. Therefore, this line of research forms a perfect symbiosis with my second line of research focused on Japanese studies. This research will also allow me to continue attracting international funding for Spanish research projects.

It will also allow me to continue building bridges of cooperation between the scientific communities of Spain and Japan in particular and of Europe and East Asia in general.

Identify keywords: International law; International relations Area of management activity:

University Interest for teaching and/or research:

Teaching research results to graduate and postgraduate students A fundamental responsibility of a researcher, in addition to conducting good research, is to disseminate and share the research and knowledge acquired.

This purpose is best served by teaching, and for me the opportunities came in the form of teaching appointments at national and international levels. I have been a lecturer in International Relations, World Politics, Global Communication, Asian Politics: China, India and Japan, Political Communication and Public International Law subjects at the University of Navarra (2011-14, 2018-19), Francisco de Vitoria University (2017-), Universitat Internacional de Catalunya (2013-15) and University of Zaragoza (2017-18). I have also been a visiting professor in Japan at Kobe University (2018-19), the International University of Japan (2016-17), the University of

Dokkyo (2019) and Osaka University (2016-17), marking a teaching career that spans over nine years. . This has also been an opportunity for me to learn and grow as a researcher and as an individual, interacting with young minds every day.

Identification of the Japanese communicative main actors and study of the effect of their actions in the international system Dedication regime: Part-time Applicant contribution: This

article summarizes and advances the first insights

of the postdoctoral research project "Communication, Democracy and Policy-Making in Japan: A Study on the Role of the International Communication in Japanese Social Cohesion and in the Government's Social Endorsement" conducted under the Japanese Studies Fellowship of the Japan Foundation FY 2016/2017. The main research objective of this investigation is to empirically study the effect international communicative tools used by Japanese citizens has in the social cohesion of domestic public opinion and the international negotiation capacity of Japan towards other regional and global actors. The hypothesis to be verified is the following. If Japan, as a democratic nation with high levels of development, experiences an increase in the use of international communicative tools (ie traditional media and digital social networks), the public opinion will experience an increase in speed in the public debate of sensitive topics. This in turn will help Japan reach stronger and faster social cohesion. Next, this social cohesion will enable the Japanese Government to possess a stronger position in negotiations surrounding sensitive topics towards other regional powers. Furthermore, the study will compare the process and speed of the formation of this social consensus between two different communicative groups. The first group will consist of Japanese citizens usually exposed to the reception of international information and accustomed to stating their opinions in these forums. The second group concerns the Japanese citizens who are not participating in this international sphere. The prediction to be confirmed is that the most internationally oriented citizens in terms of communication will show a more collected public opinion than the communicative isolated group. Likewise, it is predicted that this first group will offer higher support towards international positions of the Japanese Government because they would already be participating in the international sphere and therefore would have an already established contact with the inputs and global opinions that the Japanese Government deals with .

Success in the creation of a multidisciplinary quantitative analytical system for studying the effects of international communication in the Japanese public opinion and Japanese policy-making process. Also, creation of an analytical model that can be exported to other democracies in the world, like Spain, and other European Union members.

Commitment regime: Full-time Contribution from the

applicant: Project summary (Give a specific description of your project). (1)

Content of the research and its purpose and significance? The main research objective of the proposed research for the Japan Foundation is to empirically study the effect that the international communicative tools used by Japanese citizens have on the social cohesion of domestic public opinion and Japan's international negotiation capacity towards other regional and global actors. The hypothesis to be verified is as follows. If Japan, as a democratic nation with high levels of development, experiences an increase in the use of international communicative tools (i.e. traditional media and digital social media), public opinion will experience an increase in speed in public debate of sensitive issues. This, in turn, will help Japan achieve stronger and faster social cohesion. This social cohesion will then enable the Japanese government to have a stronger position in negotiations around sensitive issues with other regional powers. Furthermore, the study will compare the process and speed of formation of this social consensus between two different communicative groups. The first group will consist of Japanese citizens who are habitually exposed to receiving international information and accustomed to expressing their opinions in these forums. The second group refers to Japanese citizens who do not participate in this international arena. The prediction to be confirmed is that the most internationalized citizens in terms of communication will show a more reserved public opinion than the communicatively isolated group. Likewise, it is predicted that this first group will offer greater support to the international positions of the Japanese Government because they would already be participating in the international arena and would therefore have an already established contact with the global inputs and opinions that the Japanese Government deals with. . The social field studied by this research project is part of a broader process of transformation of all modern societies. It manifests itself in a progressive globalization of cultural trends, consumption of global information and participation in global social and economic forums. The importance of this communicative dimension in the worldwide transformation of societies is so decisive that it justifies the need for a scientific and empirical analysis. Once completed, this research will allow academics, politicians and decision makers to have a deeper understanding of the role of international communication in the speed of change in Japanese society. This knowledge will allow us to understand the impact of information consumption on social consensus towards sensitive issues and on social support for government strategies. The research will offer a deeper understanding of contemporary Japanese society, its relationship with new global information and its support for the Japanese government. All the knowledge obtained will bring great benefits to the academic, social and institutional dimensions, enhancing Japan's role as a 21st century global actor that promotes international stability from the communicative dimension.

(2) Research Methodology and Research Plan (Please indicate specifically the activities in Japan and the time required) This research will consist of five stages with specific research methodology adapted to each one: Stage 1: Identification and analysis of the Japanese communication environment. Location: Niigata, Tokyo and Kansai area. Duration: 1st - 3rd month. Activities: In-depth interviews, focus groups and expert panels with CEOs of traditional media, with CEOs of digital platforms and Japanese communication scholars (International University of Japan, Universities of Tokyo and Kansai). regime: Part-time Contribution

of the applicant: Analysis of digital communication

trends and their impact on the already established global public discussion forum. Participation in the Tokyo Game Show in Japan, covering the

and analyzing the impact of new digital communication tools in the articulation of Western and Asian societies. Also, participation with 2 articles on Digital Communication presented, accepted and published in Congresses and publications: 1) THE NEW GLOCAL PARADIGM OF GENDER EQUALITY: COMMUNICATIVE CHALLENGES OF A MULTICULTURAL SOCIETY FOR LOCAL AND REGIONAL GENDER EQUALITY SERVICES IN NAVARRE. Abstract: Western societies are becoming more multicultural due to the growing phenomenon of migration with different cultural and religious backgrounds. This social complexity can sometimes pose a challenge for gender equality communication campaigns launched. In Spain, gender equality services are a government competence transferred to the regional and local level where they are fully developed and implemented in closer contact with the local population.

The combination of these two phenomena (a local representation of a global audience and regional and local institutional communicative actors) suggests that there is a new paradigm in institutional gender equality work characterized by being glocal: a combination of the global and local dimensions. This article identifies this communicative challenge based on the case study of Navarra and its gender equality services. Keywords: International communication, Gender, Equality, Glocal, Navarra, Multiculturalism, Transcultural communication. 2) THE VIRTUAL GENDER IDENTITY PHENOMENON AND ITS INTERNATIONAL PROJECTION ON ONLINE GAMES Abstract: Video games, with approximately 1.98 billion players in 2015 and \$91.5 billion in revenue, are one of the most important manifestations of artistic expression and channels of global communication in our society today. Male and female players with very different cultural backgrounds from around the world simultaneously participate in computer-generated worlds where they adopt different roles according to the narrative of each world. In these communicative displays, each player can adopt a virtual gender role that can be male, female, or neutral, regardless of the gender identity in the real world. This virtual space of freedom for the expression of a unique gender identity in an international communicative environment has received little attention from the academic world, despite the important social, cultural, and anthropological impact of this phenomenon. This article analyzes the possibilities of this virtual construction of gender identity and identifies the factors that condition it in the global communicative environment where

occurs.

Relevant results: The aim of this research

is to analyse and understand international communication by applying the theory of rational choice. To do so, a case study will be used in which a proposal for a specific adaptation to the model in the field of communication will be carried out. This case study will be the territorial dispute over the Senkaku / Diaoyu Islands between three international political actors (Japan, People's Republic of China and Republic of China-Taiwan). To

In order to understand the benefits that rational choice theory can bring to the study and understanding of communication, it is convenient to make a first approximation to the three axes or dimensions in which this research has been articulated: the theoretical dimension, the historical dimension and the application dimension. to the field of international communication. Dedication regime: Full time Applicant's contribution: In the theoretical part

of the research, both the theory of rational choice and

alternative formulations have been studied under the theoretical framework of game theory. This scenario has found much confusion and ambiguity in the labeling and understanding of these theories, since different conceptual and methodological proposals have been wrongly considered as similar and similar proposals wrongly identified as different. The contribution of this thesis to the chaotic panorama of theories of rationality has been the proposal of a study in a comprehensive two-dimensional scheme based on two factors: the complexity of the actor in each theory (simple and complex) and the final objective of the study (incentives, actor behaviors on the one hand and the state of interactions between them, on the other). Thus, after applying this proposal for the study of choice theories, it has been concluded that rational choice theory has focused mainly on the incentives and responses of simple actors, so the main field of application has been economics. Positive political theory has focused on complex actors, largely studying the functioning of political parties and coalitions. Social choice theory has the opposite niche to rational choice when it studies the interactions between complex actors such as nations, societies and cultures.

Public choice theory has finally focused on the relationships established between simple actors such as those created in constitutional and negotiation processes. Once this proposal was applied, in a consistent, unified and integrated order, the research synthesized the most interesting elements of each formulation to build the communicative analysis model. This is composed of four modular elements according to the analyst's capacity to acquire and process information, thus offering a high adaptability of the analysis to multiple social scenarios. This model consists of four elements: first, the ordinal articulation of the complexity of the actors and the clustering strategy allows us to consider them as simple or complex according to the informative capacity of the analysis.

Secondly, the study of the multiplicity of interaction dimensions allows for harmonization in an integral scheme. Thirdly, the consideration of the communicative projection of the hierarchy of preferences allows us to study the process by which individual systems are organized into a group. Finally, the calculation of the equilibrium point reached between actors can explain the social scenarios achieved as a result of both communicative action and participation in other interaction dimensions. Thus, in its application to international communication and, more specifically, to the case study of the dispute over the Senkaku/Diaoyu Islands, this model has been able to unite, in a single interaction model, all these elements by formally analyzing them and offering an explanation of the equilibrium point reached, as well as the potential evolutions with the modifications of the factors that configure it.

summarizes and advances the first insights of the postdoctoral research project "Communication, Democracy and Policy-Making in Japan: A Study on the Role of the International Communication in Japanese Social Cohesion and in the Government's Social Endorsement" conducted under the Japanese Studies Fellowship of the Japan Foundation FY 2016/2017. The main research objective of this investigation is to empirically study the effect international communicative tools used by Japanese citizens have in the social cohesion of domestic public opinion and the international negotiation capacity of Japan towards other regional and global actors. The hypothesis to be verified is the following. If Japan, as a democratic nation with high levels of development, experiences an increase in the use of international communicative tools (ie traditional media and digital social networks), the public opinion will experience an increase in speed in the public debate of sensitive topics. This in turn will help Japan reach stronger and faster social cohesion. Next, this social cohesion will enable the Japanese Government to possess a stronger position in negotiations surrounding sensitive topics towards other regional powers.

Relevant results: In this article, I propose a new interpretation of the Japanese communicative dimension and of Article 21 of the Japanese Constitution (which protects freedom of expression) based on rational choice theory as the theoretical framework. This new approximation proceeds from the assumption that the rationality of an actor (an individual actor or a collective actor like Japan) depends on the capacity of this actor to access and process information. The rationality of this being that the capacity to understand is an ability to satisfy one's own hierarchy of preferences. Therefore, this research proposes a new interpretation of Article 21 of the Japanese Constitution as a constitutional commitment of Japanese society to guarantee its level of rationality as a complex society. To do this, in this research I will offer a deep taxonomic identification and description of rational choice theory evolution and its three complementary formulations (the positive political theory, social choice theory and public choice theory), an approximation of the communicative dimension of Japan and a new interpretation of Article 21 of the Japanese Constitution in the light of the rational choice theory.

Relevant results: The postwar development of the Intelligence Services in Japan has been based on two contrasting models: the centralized model of the USA and the collegiality of the UK, neither of which has been fully developed. This has led to clashes of institutional competencies and poor anticipation of threats towards national security. This problem of opposing models has been partially overcome through two dimensions: externally through the cooperation with the US Intelligence Service under the Treaty of Mutual Cooperation and Security; and internally through the pre-eminence in the national sphere of the Department of Public Safety. However, the emergence of a new global communicative dimension requires that a communicative-viewing remodeling of this dual model is necessary due to the increasing capacity of the individual actors to determine the dynamics of international events. This article examines these challenges for the Intelligence Services of Japan and proposes a reform based on this new global communicative dimension.

Relevant results: The new intelligence sharing agreement between Japan and South Korea could create a new international scenario, where regional coalitions take the place of a US super-protector. A classic Latin adage teaches us: Si vis pacem, para bellum ("If you want peace, prepare for war"). One of the most obvious displays of this statement was the Cold War's mutual assured destruction doctrine that helped avoid a global escalation of conflict. Now, with the emergence of the information society and globalization, the sharing of intelligence plays an even bigger role in security. In an era where threats to security are not limited to state actors but also range from Individual lone wolves to extremist religious movements, the need for efficient preemption has become vital. In light of this new global phenomenon, the long-awaited announcement of an intelligence-sharing deal signed by Japan and South Korea has recently been made. The novelty of this agreement is that the exchange of information will be carried out bilaterally between both countries without using the US as an intermediary.

Relevant results: Game Theory is a model of study of the interactions between different actors (politics, economics, etc) that analyzes the interrelation that is established among them with the final purpose of reaching the maximization in the individual benefit of each of player. In the scheme of structuration of the Cycle of Intelligence designed by Robert M. Clark (Planning, Recollection, Processing, Analysis and Diffusion), the employment of Game Theory in the communicative discourse analysis offers interesting application possibilities in its fourth phase: Analysis and Production . This perspective makes new chances for the analysts possible based on three reasons. First of all, the consolidation and diffusion of the society of information as a global social model has caused a displacement in the typology of the sources employed during the Recollection phase. This change has consisted of the progressive substitution of closed sources for open ones or OSINTs. Second, this change of paradigm has also modified the localization of the most difficult steps in the Cycle of Intelligence: before the consolidation of the information society, the Recollection phase was typically the most difficult and, therefore, the most costly in terms of economic and human resources. After this change of sociological paradigm, the hyper abundance of information has made the OSINTs more employed than the closed ones, having reduced the cost of the Recollection phase. But this has had a counterpart: this increase in the quantity of collected data has increased the complexity of the process of this information exponentially. As a result, the need to develop better filters for data selection has become a substantial factor for all the Intelligence procedures. Finally, the Game Theory model allows one to employ a theoretical model with a high degree of flexibility and adaptability for analyzing the varied roles of the different political, economic and social actors that are played in any international dimension. These potential fields of study include, but are not limited to, Public Diplomacy, formal diplomacy or any other typology of interactions between complex social players. The conclusion of this research is that the massive employment of OSINTs in this new society of information social paradigm makes necessary the use of communicative analysis to achieve a high level of accuracy in the Cycle of Intelligence. The proposed Game Theory based model offers an efficient way to achieve this objective with a minimal cost in terms of time and computing effort.

Number of journals in cat.: 277

Relevant results: The application of the Game Theory as a theoretical model for the communicative analysis has provided interesting methodological tools with which it has been possible to identify, classify and study different communicative phenomena with great depth. One of these detected phenomena is the Multi-Player phenomenon, which consists of the multiplicity of roles that a single entity plays in a communicative field of interaction. This modeling of the social reality has a great interest in the Public Diplomacy because this is the field where the identities of the social, political and cultural actors are more diffused and, therefore, difficult to identify. This difficulty also extends to the study of their communicative behavior in this field. The theoretical modeling of the Multi-Player phenomenon is conducted by a basic matrix of Game Theory adapted to the communicative field. This implies the identification of the elements Player, Field of Interaction and Goal of Interaction. This structure combines the conceptual strength of the mathematical-functionalistic dimension of Game Theory with the versatility of its philosophical-political dimension. This combination leads to the creation of a tool that can be applied in a wide variety of communicative scenarios due to its adaptability. This analytical matrix can be applied to the study of the political and institutional communication as integral parts of a whole communicative ecosystem due to the fact that the entities that emit their messages develop a multiplicity of roles in the society of information. The research has concluded that it is possible to identify, analyze and quantify the different roles that a single entity develops in different dimensions. Therefore able to predict the future evolution of the field analyzed with a higher level of accuracy and understanding of the communicative phenomena. This offers to the scholars a useful tool to analyze the social and communicative environment and their links towards the political actors that participate in the domestic and international dimension.

Relevant results: The study of the role that China plays as a political actor in Asia-Pacific has been conditioned by two fundamental factors. First of all, the inner dimension of the Communist Party. Secondly, the outer dimension that implies the transformation of the country into the "industry of the world". These two factors have been analyzed from the binary perspective of the "stabilization-destabilization" of the political environment. This is a paradigm that has been revealed inexact and inefficient. It is necessary to overcome this limited paradigm and substitute the conceptual variable "stability-instability" by the variable "maintenance-rupture of the status quo" in order to analyze the role that China plays in the political context of the Asia-Pacific. This new paradigm recognizes

that not all the international stability of the political dimension is reached by the maintenance of outdated social, political and economic structures. At the same time, it points out that not all the rupture of these structures, when they are obsolete in a rapid change global environment, leads to international instability. Analyzing the role of China according to this new variable (maintenance-rupture of the status quo) offers more efficient tools to understanding the role of China in the globalized world of the early 21st century. The conclusion of this research is that the economic and diplomatic success of China is creating a powerful network of incentives for the Chinese Communist Party to maintain the current status quo of the international political environment. This is leading to the emergence of China as an atypical non-interventionist global power that tries to maintain the current international conditions to continue this intense growth process. At the same time, if this growth is not maintained, China can have incentives to modify the international status quo in order to re-configure it and to generate new conditions to achieve this growth. This analysis allows one to overcome the limited vision of China as a factor of stabilization-destabilization and substitute it for the more accurate conceptualization of China as a diplomatic player that develops a role in the maintenance-rupture of the current international status quo depending on the incentives that each option will provide. At the same time, this article discusses the idea that the Communist Party of China is transforming its communicative claim for legitimacy from an ideological basis to a pragmatically and nationalistic one. The economic success of China and the governmental promotion of a nationalistic sentiment have become two important propaganda tools for the communicative role of the CPC. This has had an important effect in the Public Diplomacy designed and projected from Beijing towards the political environment of the Asia Pacific, on a regional scale, and to the entire globalized world, in a global perspective.

9 Japan's Science and Technology Diplomacy: Society 5.0 and its International Projection. *Communication & Society*. 36 - 8, pp. 225 - 239. 2023. Available on the Internet at: <<http://doi.org/10.15581/003.36.2.225-239>>.

Type of production: Scientific article Type of support: Magazine Relevant results: Japan is the third

largest economy on the planet but lacks coercive capacity due to Article 9 of its Constitution, which prevents it from having an army and declaring war. This means that it can only rely on persuasion to influence the international sphere and achieve its political objectives. One of the tools it has for this purpose is public diplomacy, which is diplomacy exercised through non-traditional means such as communication, art and culture. One branch of public diplomacy is science and technology diplomacy (S&T Diplomacy), which consists of collaboration in these areas with other nations to strengthen their international projection, as well as the dissemination of scientific knowledge and technology transfer between nations. S&T diplomacy has become a major focus for Japan of its diplomatic action since it launched the Society 5.0 project in 2016, which sought to revolutionize Japan's economy, society and governance through technology. This S&T diplomacy has the potential to not only strengthen Japan's external action, but also to transform its industries and research while it is transforming the infrastructures of Japan's partner nations, like the construction of subway and high-speed rail networks in India. This article will first analyze the theoretical framework of public diplomacy and science and technology diplomacy. Next, Japan's public diplomacy will be studied by comparing The Soft Power 30 and Global Soft Power Index. Finally, Japanese science and technology diplomacy will be analyzed by assessing the initiatives contained in the Japanese Society 5.0 project.

Scientific article Type of support: Magazine Relevant results: The Indo-Pacific is becoming the new

geopolitical axis of the planet for multiple reasons, among which three stand out: security (with six nuclear powers in the area, some of them amidst clearly growing tensions), demography (with 64 percent of the world population) and economy (with 62 percent of world GDP).

Since its founding, the European Union has been absent in the development of a strategy for the region, an absence that has recently ended with the publication of national strategies of three member states (France, Germany, and the Netherlands), as well as such as the EU announcement of a future EU strategy for the region. This paradigm shift may mark the beginning not only of greater European cohesion in terms of strategic projection, but also of greater European geopolitical assertiveness in a post-COVID-19 world in the Indo-Pacific and others

regions. This article will trace the birth and evolution of the Indo-Pacific concept, will identify the reasons for its geostrategic importance for the European Union, and will analyze both the three national strategies of France, Germany, and the Netherlands as well as the announced EU strategy for the region.

Relevant results: International communication plays an increasingly fundamental role in the projection of Japan in the globalized world. Companies, governments, and associations of Japanese civil society face the challenge of projecting their identity into an increasingly complex and interrelated public sphere. In a 21st century dominated by the information society paradigm as a global phenomenon, this public sphere of discussion and debate is, also, global. Therefore, Japanese political and economic actors face the need to adapt their communication to this new international communicative dimension. Japan can find a possible solution to this challenge in glocalism, the paradigm that merges global and local dimensions to provide a more holistic view of the current globalized world. This terminology, originally a Japanese marketing communication concept, *dochakuka*, has spread out over other disciplines of the social sciences providing useful tools to understand and study the confluence of local identities and global dynamics. In this article, the possibilities of glocalism to study and reinterpret the international communication of the Japanese political and economic actors are analyzed as a tool to increase the competitiveness, international visibility and global projection of Japan.

Relevant results: This article explores the possible consequences that Donald Trump's victory may have for the dynamics of relations between the People's Republic of China and Japan, with a special focus on the security dimension. It presents a study of the main actors involved, as well as the hierarchy of preferences of each of them and the succession of events that have shaped the current situation in East Asia. It also identifies different potential future scenarios and studies the opportunities that Trump's new policy may represent for the emergence and consolidation of mechanisms for de-escalation of tensions in terms of security at the regional level in East Asia.

Yes Relevant results: China has been

analyzed as a factor of instability in the international political configuration (a result of the application of Cold War schemes); and as a global stabilizing factor (a result of its role as a global economic actor). This article attempts to examine both aspects and explain why the future of China's role lies in the establishment of a closer network of interrelations between individual actors, organizations, the media and official political actors.

Relevant results: Video games, with approximately 1.98 billion players in 2015 and \$91.5 billion in revenues, are one of the most important manifestations of artistic expression and channels of global communication in our current society. Male and female players with very different cultural backgrounds from all over the world participate simultaneously in computer generated worlds where they adopt different roles in accordance with each world's narrative. In these communicative exhibitions, each player can adopt a virtual gender role that can be masculine, feminine or neutral, independently of the gender identity in the real world. This virtual space of freedom for the expression of a unique gender identity in an international communicative environment has received little attention from the academic world, despite the important social, cultural and anthropological impact of this phenomenon. This article analyzes the possibilities of this virtual gender identity construction and identifies the factors that determine it in the global communicative sphere where it occurs.

Relevant results: Western societies are becoming more multicultural due to the increasing phenomenon of migration with different cultural and religious backgrounds. This social complexity can sometimes pose a challenge for the gender equality communicative campaigns launched. In Spain, the gender equality services are a government competence transferred to the regional and local level where they are fully developed and implemented in a closer contact with the local population. The combination of these two phenomena (a local representation of a global audience and regional and local institutional communicative actors) suggests that there is a new paradigm in the gender equality institutional work characterized by being glocal: a combination of the global and local dimensions. This article identifies this communicative challenge employing the case study of Navarra and its gender equality services.
